MARINE ALIGNMENT

OIL PRODUCT AND CHEMICAL TANKERS

With Easeacon you get a proper planning tool for your fleet or single vessel, and whether you own or operate crude oil, product oil or chemical tankers, Easeacon will reflect the way the vessels are best operated - your way.

Easeacon can interface to tank monitoring, draught measuring, cargo product tables, tank cleaning and communication systems, expanding the concept of the standard of a loading computer.

Easeacon links to all contemporary monitoring system protocols and gives the operator the freedom to make preplanning, simulations and adopt actual values on one-off, intermediate or continuous basis.

Easeacon incorporates e.g. ASTM tables to ease the operator workload and to minimise the risk of human error.

By use of the Load Sequence module and customised load/discharge logging and reports your pre-planning and documentation requirements are met.

Easeacon can implement the documentation standards of the organisation in your day-to-day reporting.

Let Easeacon handle cargo information transmissions between ships and shore offices. Whether you use CD's, floppies, e-mail, fax, telex or you are online, Easeacon will support the communication platform for fast and safe informa-tion exchange.

It is our mission to provide accurate and adequate support whenever you need it and wherever you are. Our quick response time ensures that you have quality assistance only a phone call away.

Developed with our customers world-wide, Easeacon is made in Denmark.
