

**MARINE ALIGNMENT**

## POLYGON SHAPED CARGO

Polygon shaped cargo items have been seen in cargo planning software before, but mostly for illustrative purposes.

It is now possible to actually work with polygons directly on the decks, thus improving stowage by taking advantage of fitting different shapes into each other.

The polygons are shaped in 2D and as any standard item you can define the height.

They start as either perfect squares or circles, and by splitting lines and dragging knuckle points any odd shape can be made. Only your imagination and creativity sets the limit.

Developed with our customers world-wide, Easeacon is made in Denmark.
